

Linear Model: MeCP2 Fold Change ~ Delta-Ratio + Coverage

Does TET efficiency change predict MeCP2 binding magnitude at significant DMRs?

Linear Model Coefficients

$R^2 = 0.007$, $F(2,8088) = 27.0$, $p = 1.96e-12$

Significance ● $p < 0.05$

Partial Regression: Delta-Ratio Effect

After residualizing out mean coverage
