

DMR Statistics Summary

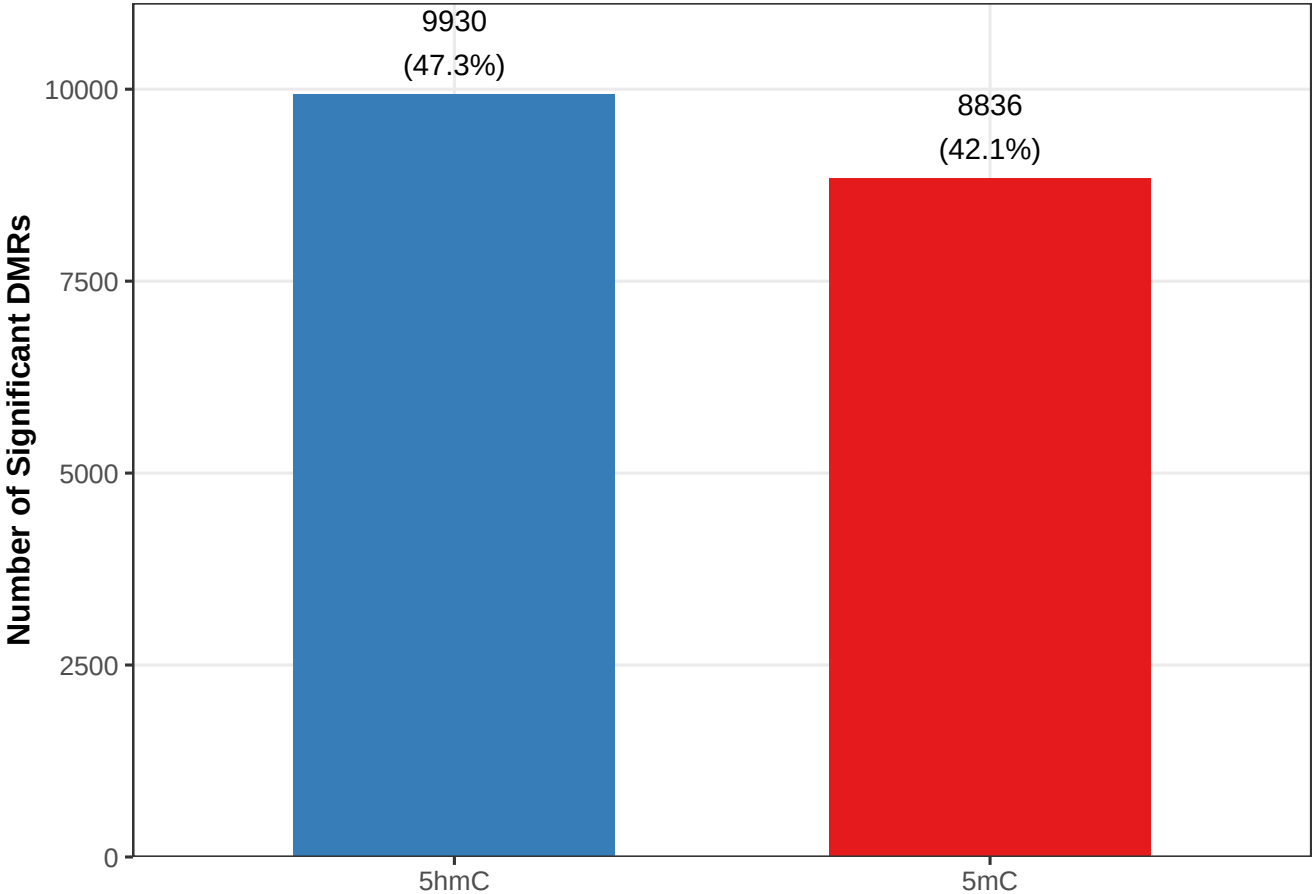

Significant mC DMRs by Genomic Region (CG Context)

q-value < 0.05 | Gene bodies dominate differential methylation

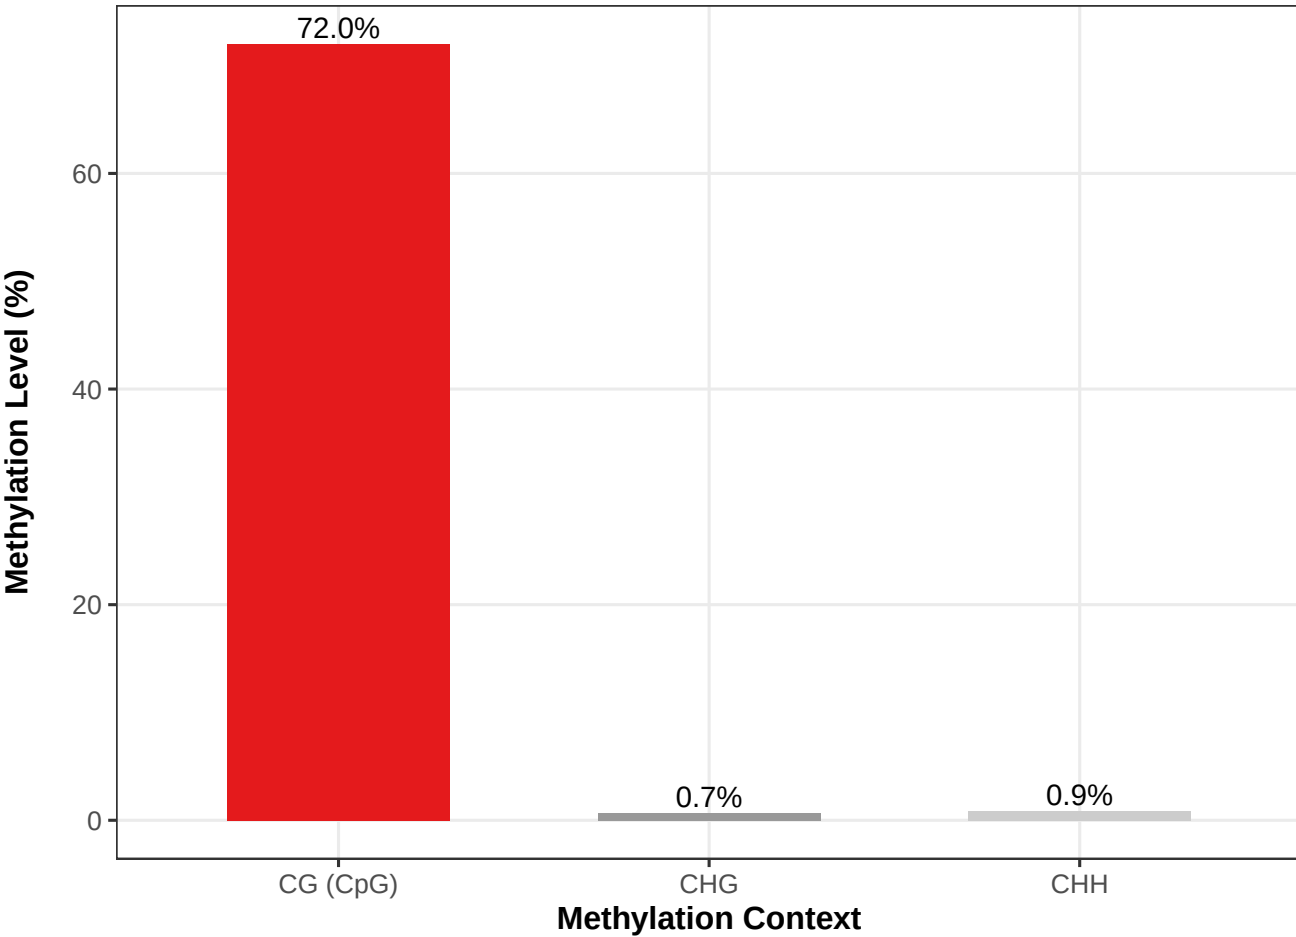

Gene Body DMRs: 5mC vs 5hmC

5hmC shows more differential genes than 5mC

Baseline Methylation by Context

CpG methylation is ~100x more abundant than non-CpG

Significant DMRs by Context

No significant changes in non-CpG methylation
