

MeCP2 is a Context-Dependent Methylation Reader

Far more genes show methylation changes than MeCP2 binding changes – methylation is necessary but not sufficient

Methylation (5mC) Hierarchy

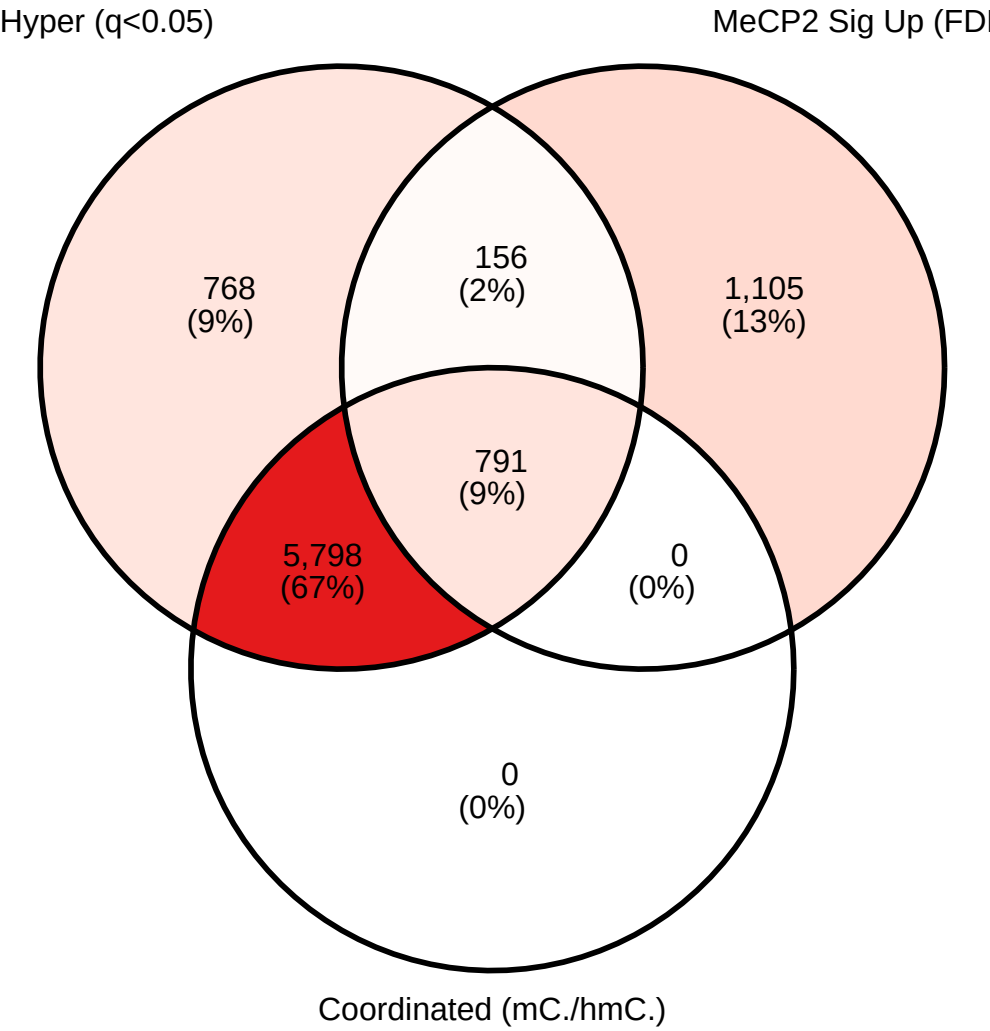

MeCP2 Binding Hierarchy

Gene-Level Overlap: Methylation vs MeCP2 Binding

Most mC hyper genes do NOT show significant MeCP2 binding increase

Methylation-to-MeCP2 Binding Funnel

Most methylated genes are NOT bound by MeCP2 – context-dependent recruitment
