

Polycomb-Specific Loop Switching at Shared Anchors

Long-range loop loss and short-range loop gain occur preferentially at Polycomb/Repressed_Promoter anchors

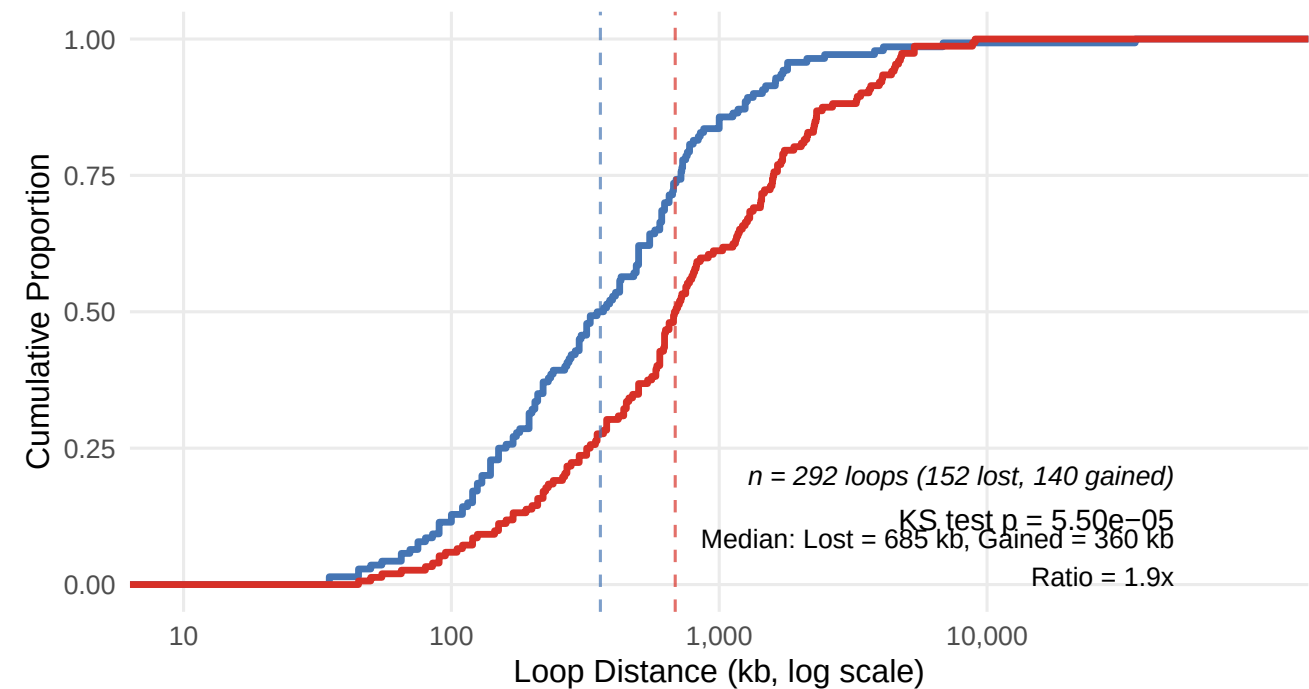

Loop Distance CDF: Polycomb-Anchored Loops at Shared Anchors

Loops with at least one Polycomb/Repressed_Promoter anchor

Loop Distance CDF: Non-Polycomb Loops at Shared Anchors

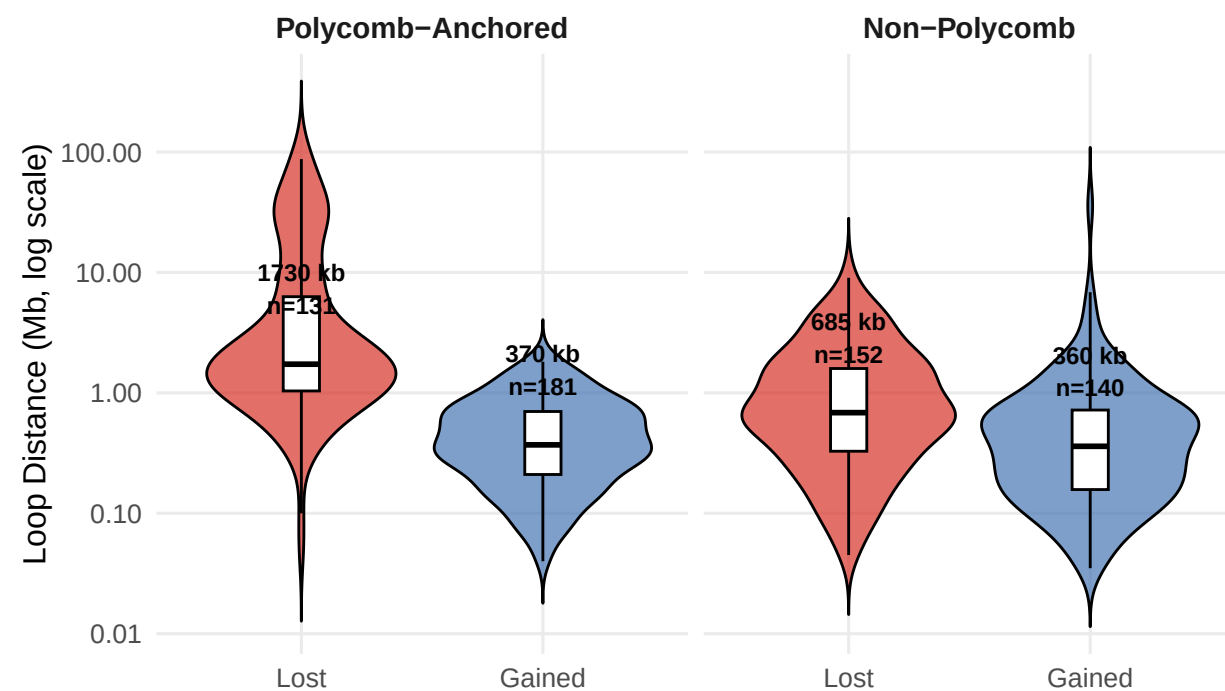

Loops without Polycomb/Repressed_Promoter anchors

Loop Distance by Polycomb Status and Direction

Interaction test: $p = 2.52e-12$

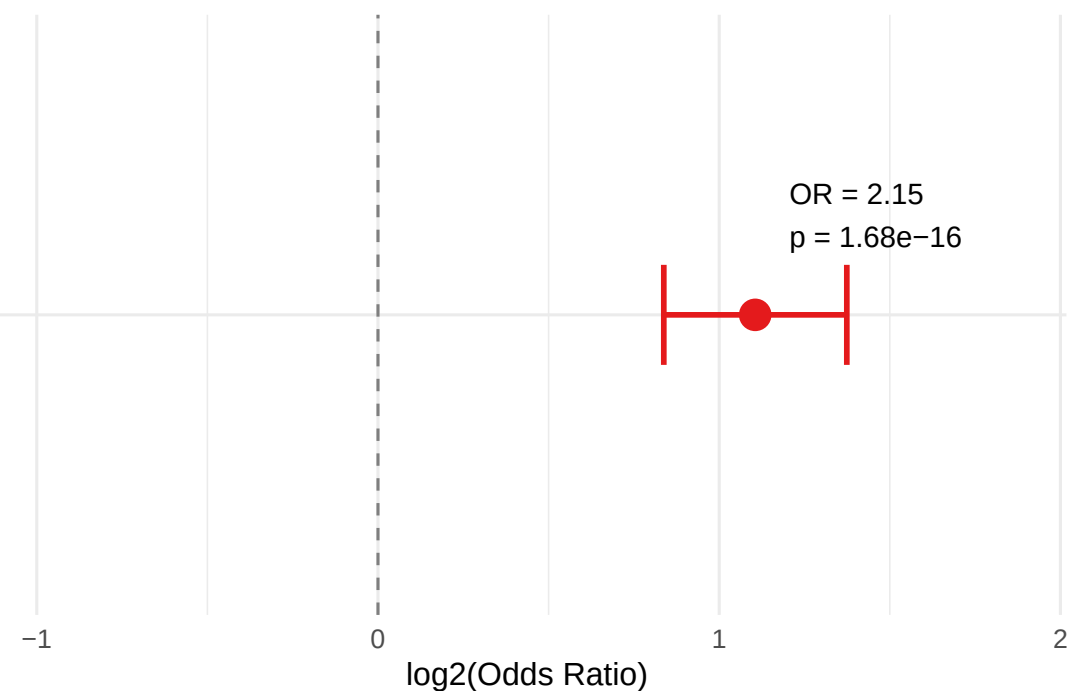

Significant interaction: Distance difference between lost/gained is larger at Polycomb anchors

Polycomb Enrichment at Shared Anchors

Shared: 51.7% Polycomb, Background: 33.2% Polycomb

Shared vs Background

Direction — Gained — Lost ● $p < 0.05$
