

Logistic Model: MeCP2 Significant Increase ~ Delta-Ratio + Coverage

Does TET efficiency change predict probability of significant MeCP2 binding increase?

Logistic Model: Odds Ratios

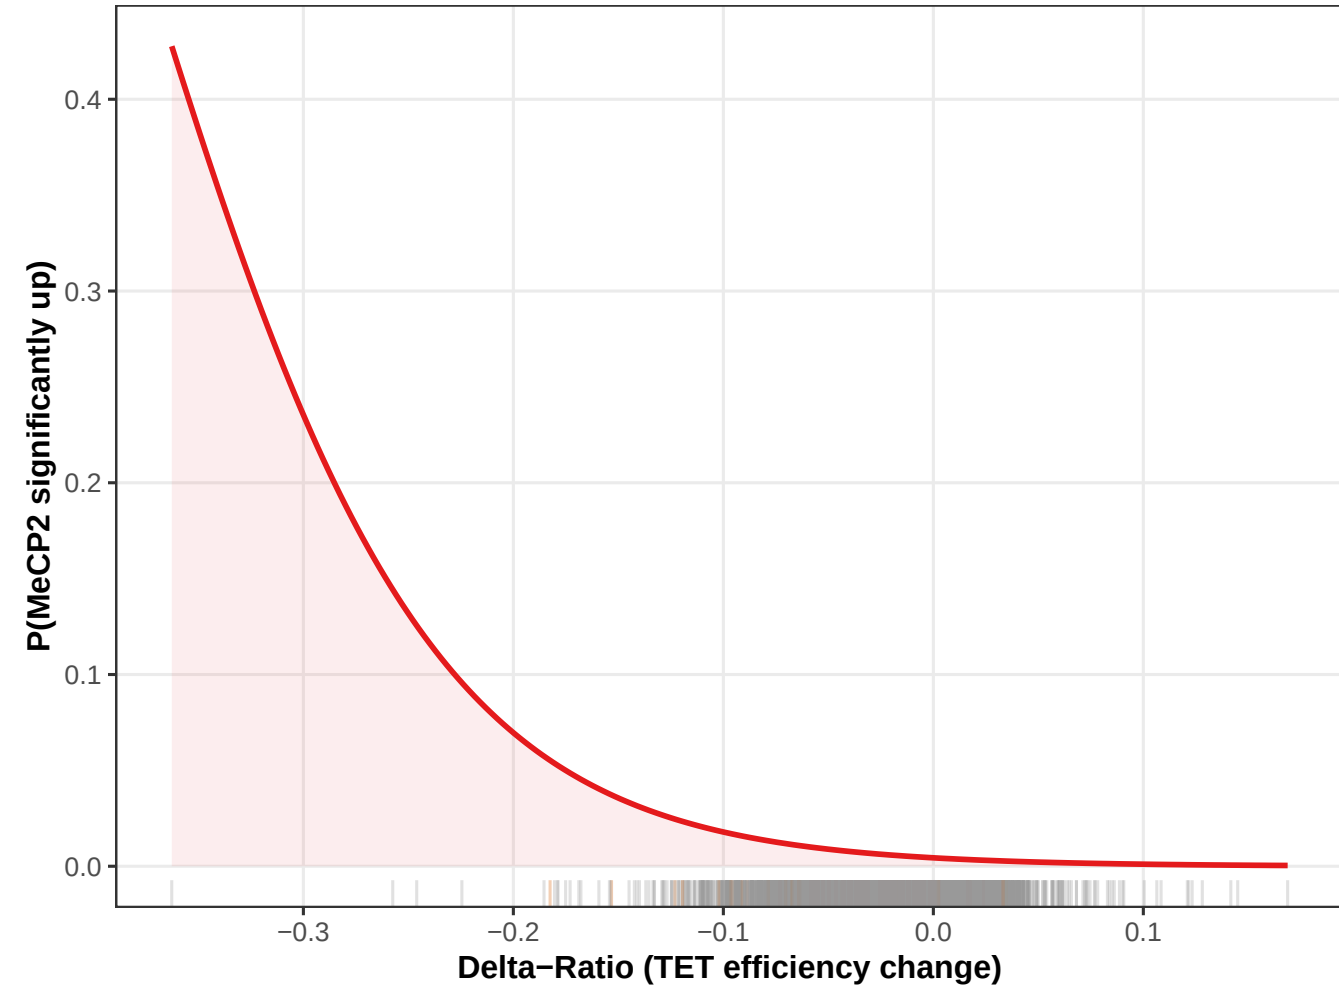

AIC = 844.6 | Reference line at OR = 1

Significance ● $p < 0.05$

Predicted Probability of MeCP2 Sig. Increase

Coverage held at median (19) | $.(delta_ratio) = -14.145$

— Not sig up — MeCP2 sig up
