

Methylation Changes Are Compartment-Specific

Constitutive het (B.2) is stable; active regions (A.1) show TET-blockade hypermethylation; B compartments show hypomethylation

Significant 5mC DMRs by Subcompartment

Constitutive het (B.2) is stable; active regions (A.1) most affected | Chi² p = 0.00e+00

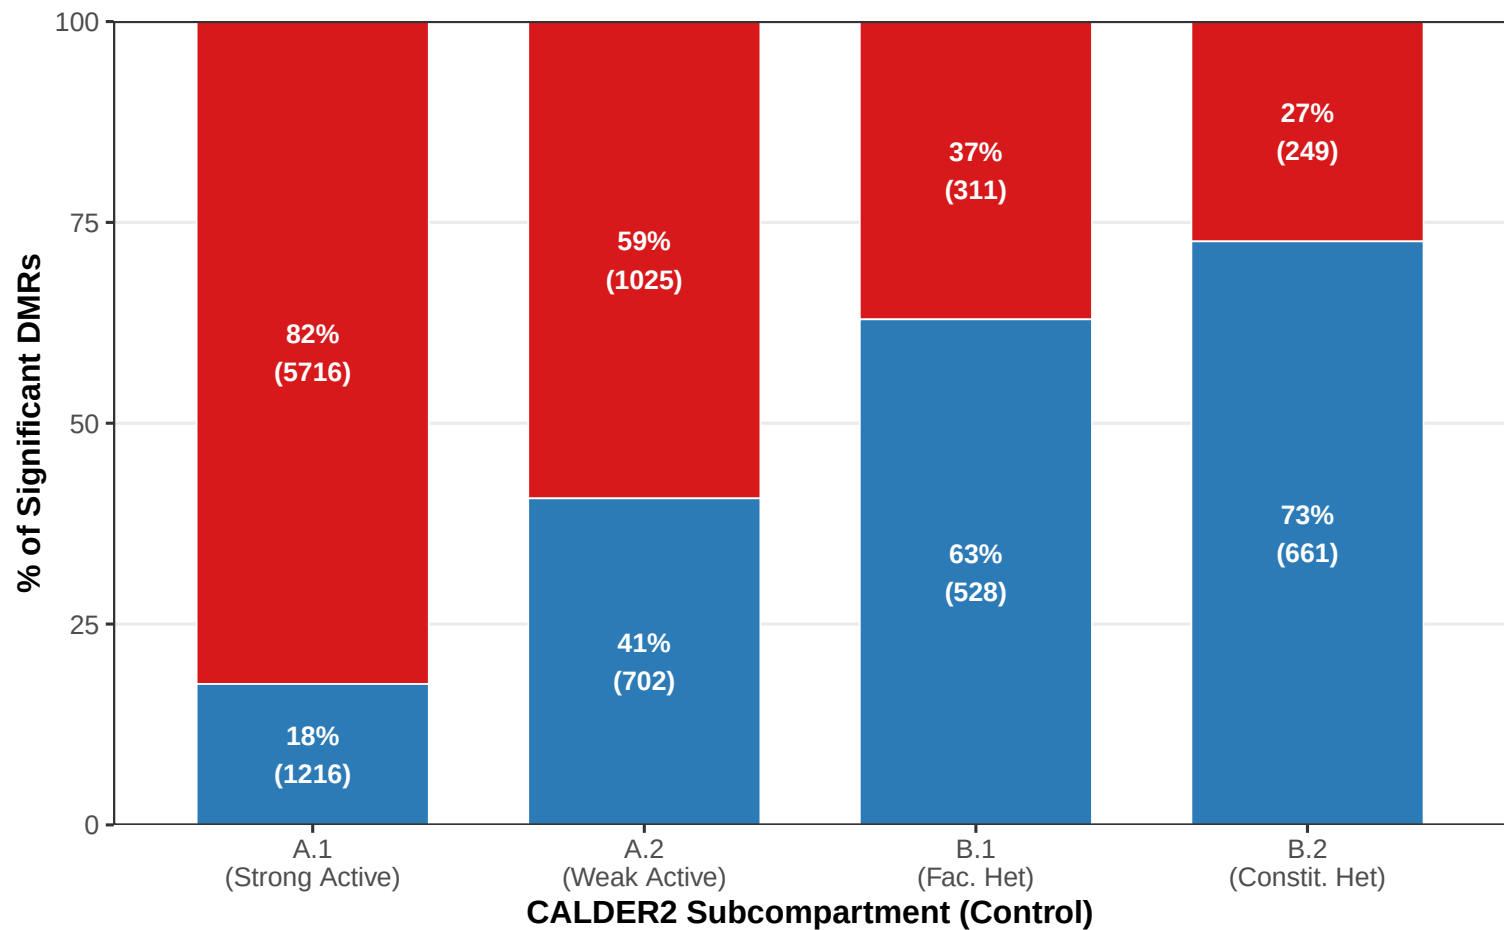

Direction ■ Hypermethylated ■ Hypomethylated

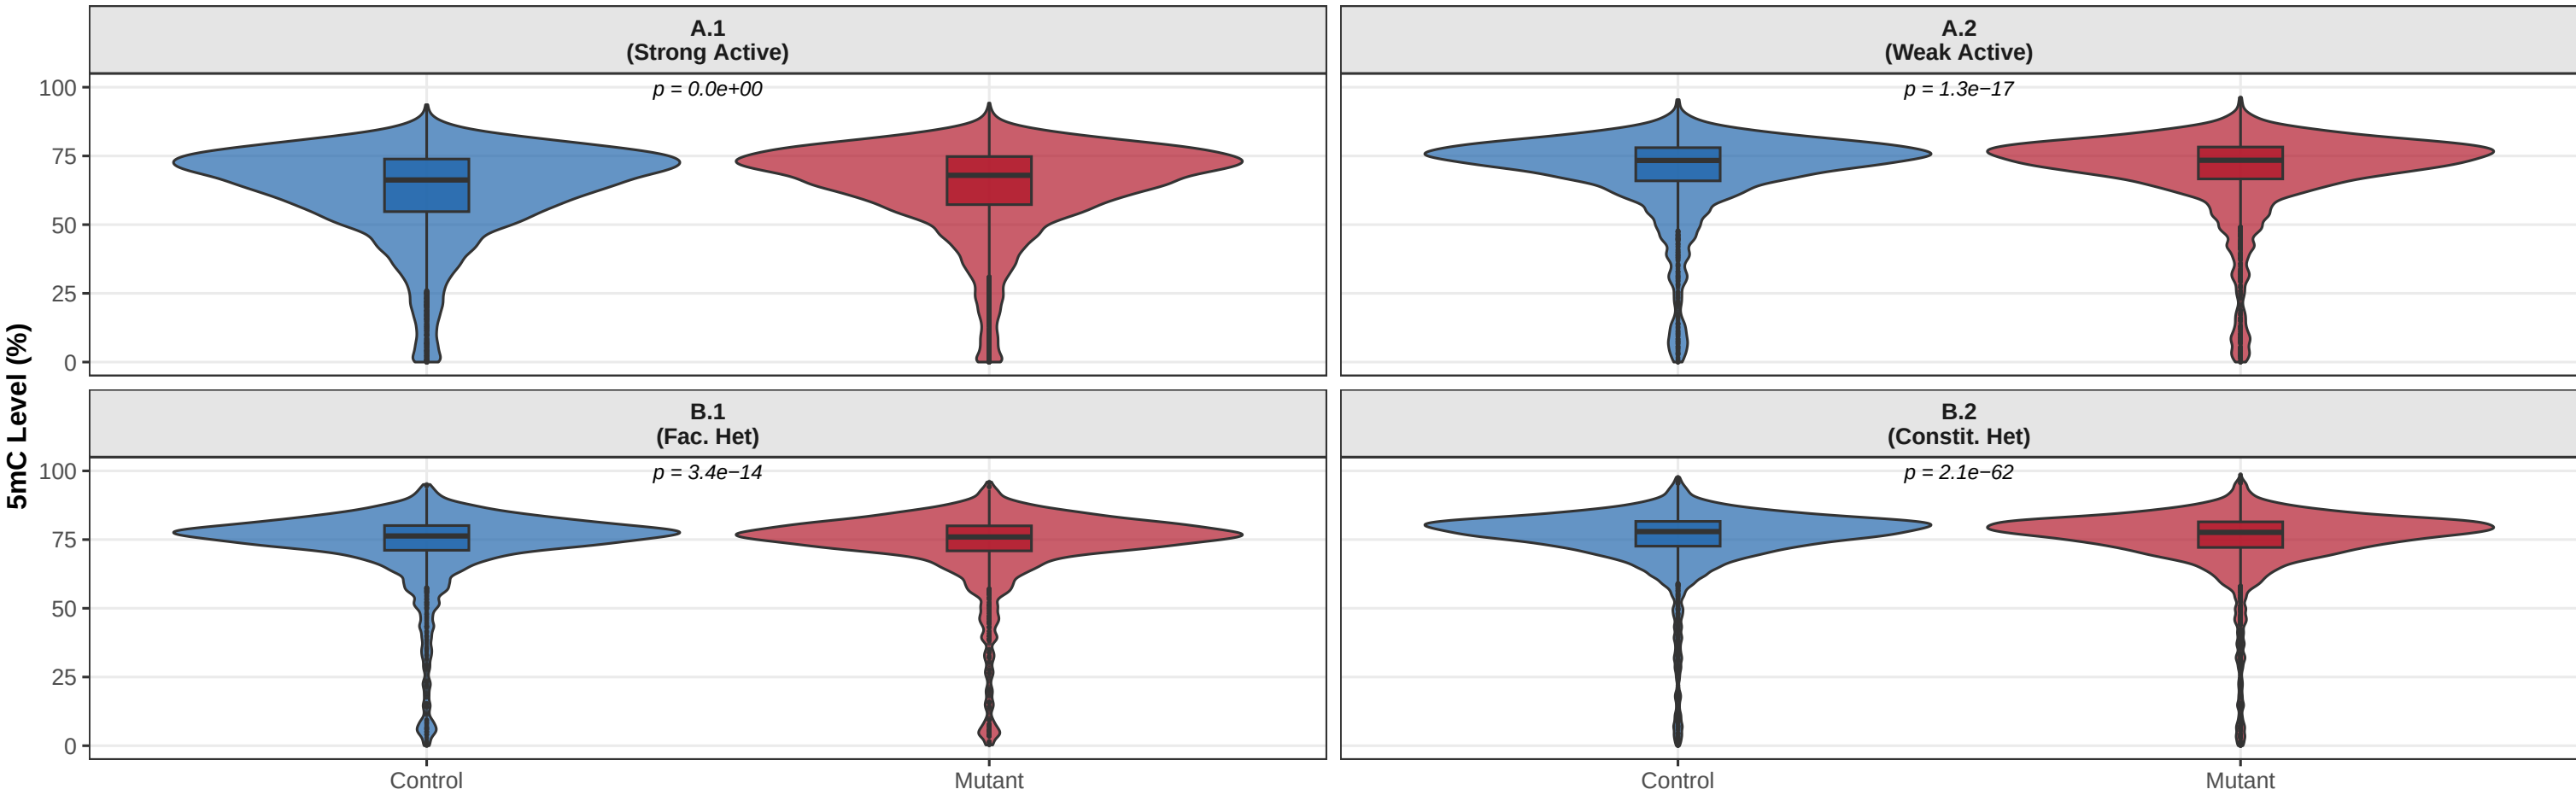

Methylation Change Direction by Subcompartment

A.1 (active): dominated by hypermethylation | B.2 (constit het): dominated by hypomethylation

Direction ■ Hypermethylated ■ Hypomethylated

5mC Levels by Subcompartment: Control vs Mutant

Significant 5mC DMRs by Histone Mark Context

H3K27me3 (fac. het) genes mirror B.1 pattern; H3K27ac (active) genes mirror A.1

Direction ■ Hypermethylated ■ Hypomethylated
