

Section 75: MeCP2 Signal Direction Reconciliation

Peak-level DiffBind shows 7,686 UP peaks, but gene-body signal drops genome-wide

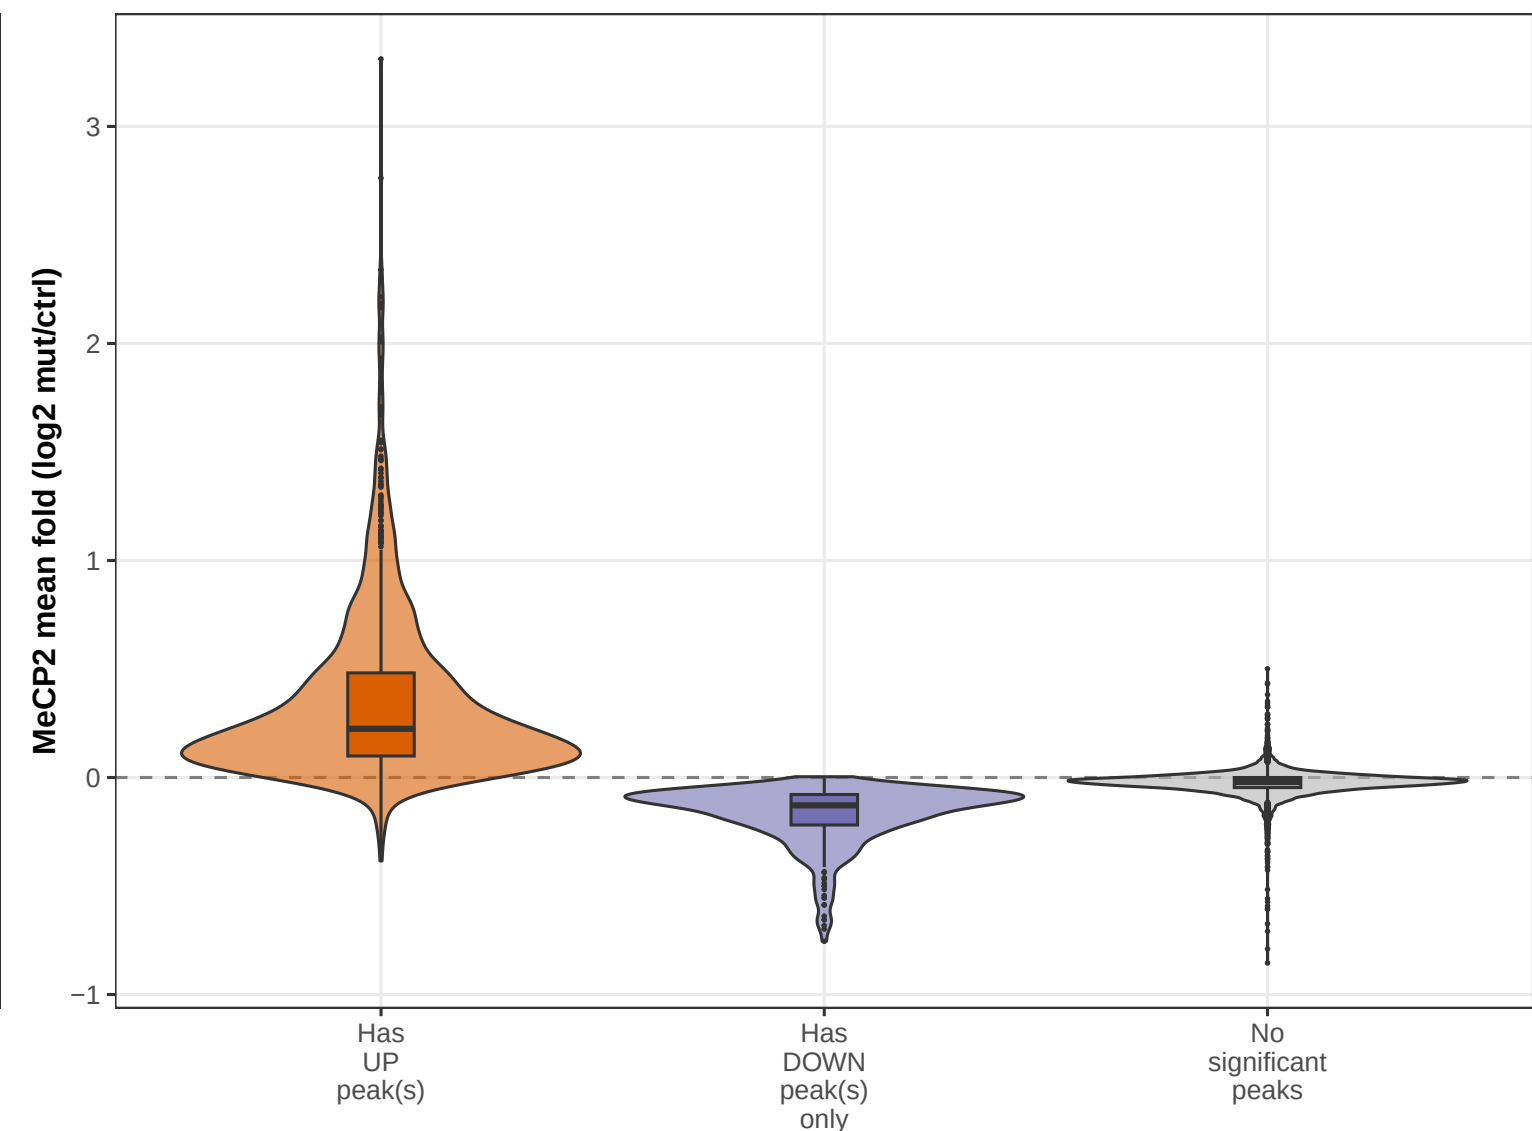

MeCP2 peak status per gene

Peak-level: 7,686 UP, 1,200 DOWN across 21,195 unique genes with peaks

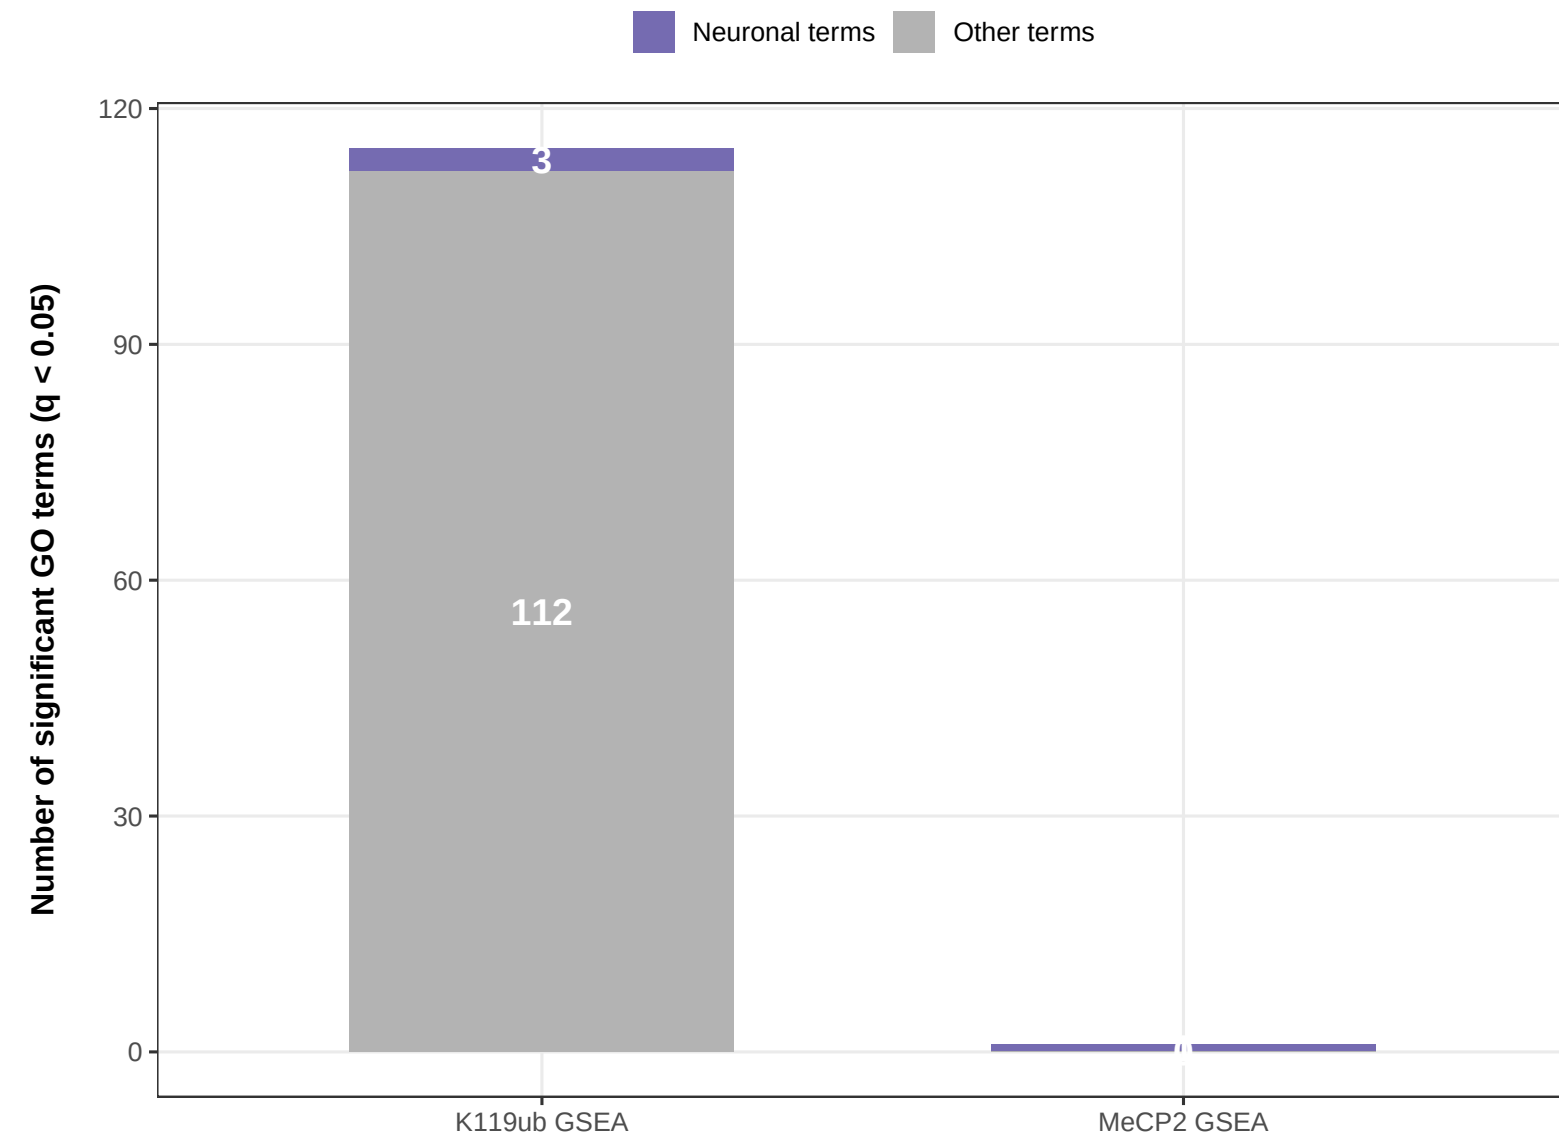

Gene-body MeCP2 signal by peak status

mecp2_mean_fold from quadrant master (concentration-weighted gene-level aggregate)

Significant GSEA GO BP terms: K119ub vs MeCP2

K119ub: 115 sig (3 neuronal) | MeCP2: 1 sig (1 neuronal)

MeCP2 UP vs DOWN peak annotation

Chi² p = 1.00e-04 | UP=7,686 peaks, DOWN=1,200 peaks
