

Section 76: Triple-Overlap & Synapse-Specific Chromatin Analysis

Neuronal: 4,118 | Synapse/axon: 2,099 | Coordinated: 6,069 | MeCP2-Up: 79 | Triple: 16

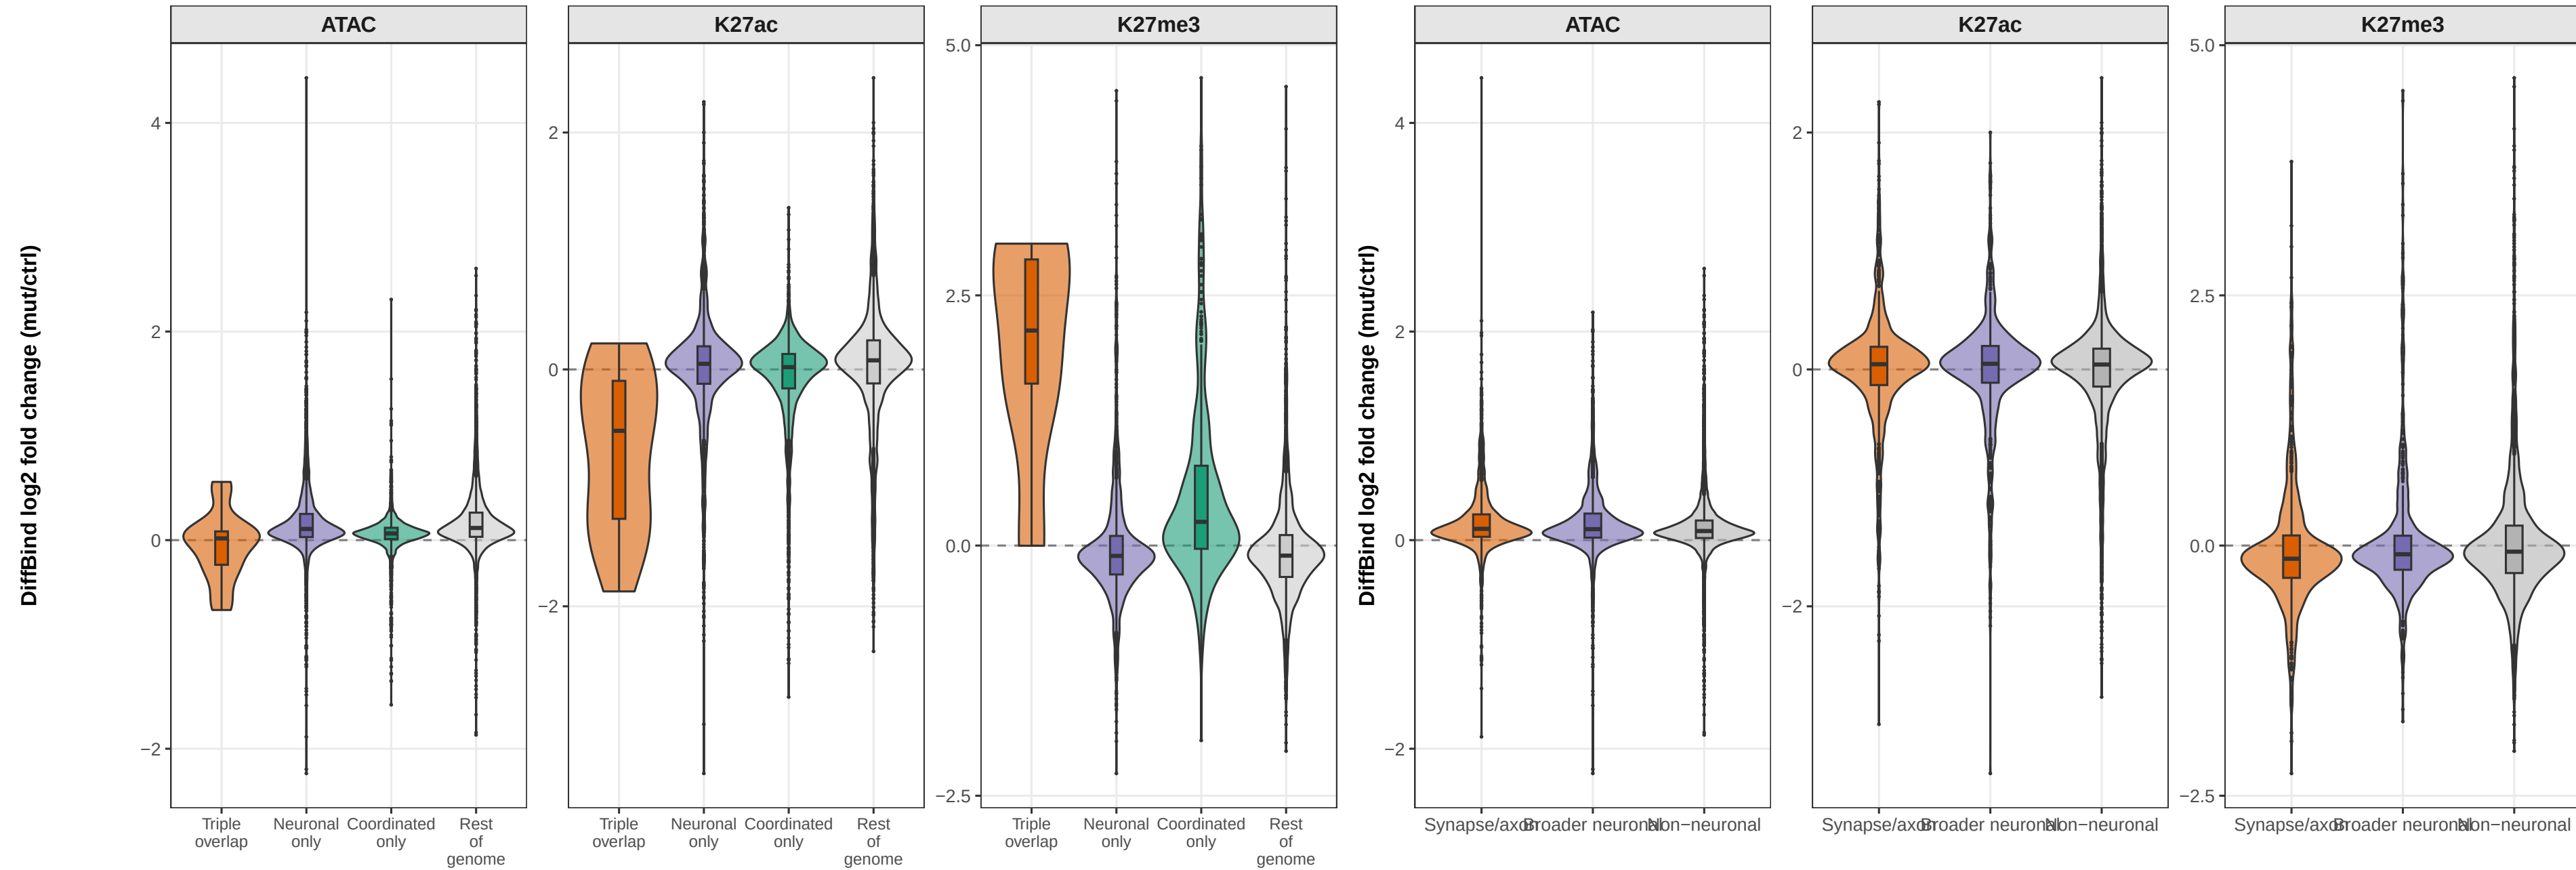

Chromatin mark changes in BAP1-KO: neuronal vs non-neuronal

DiffBind log2FC per mark | Wilcoxon rank-sum p-values shown

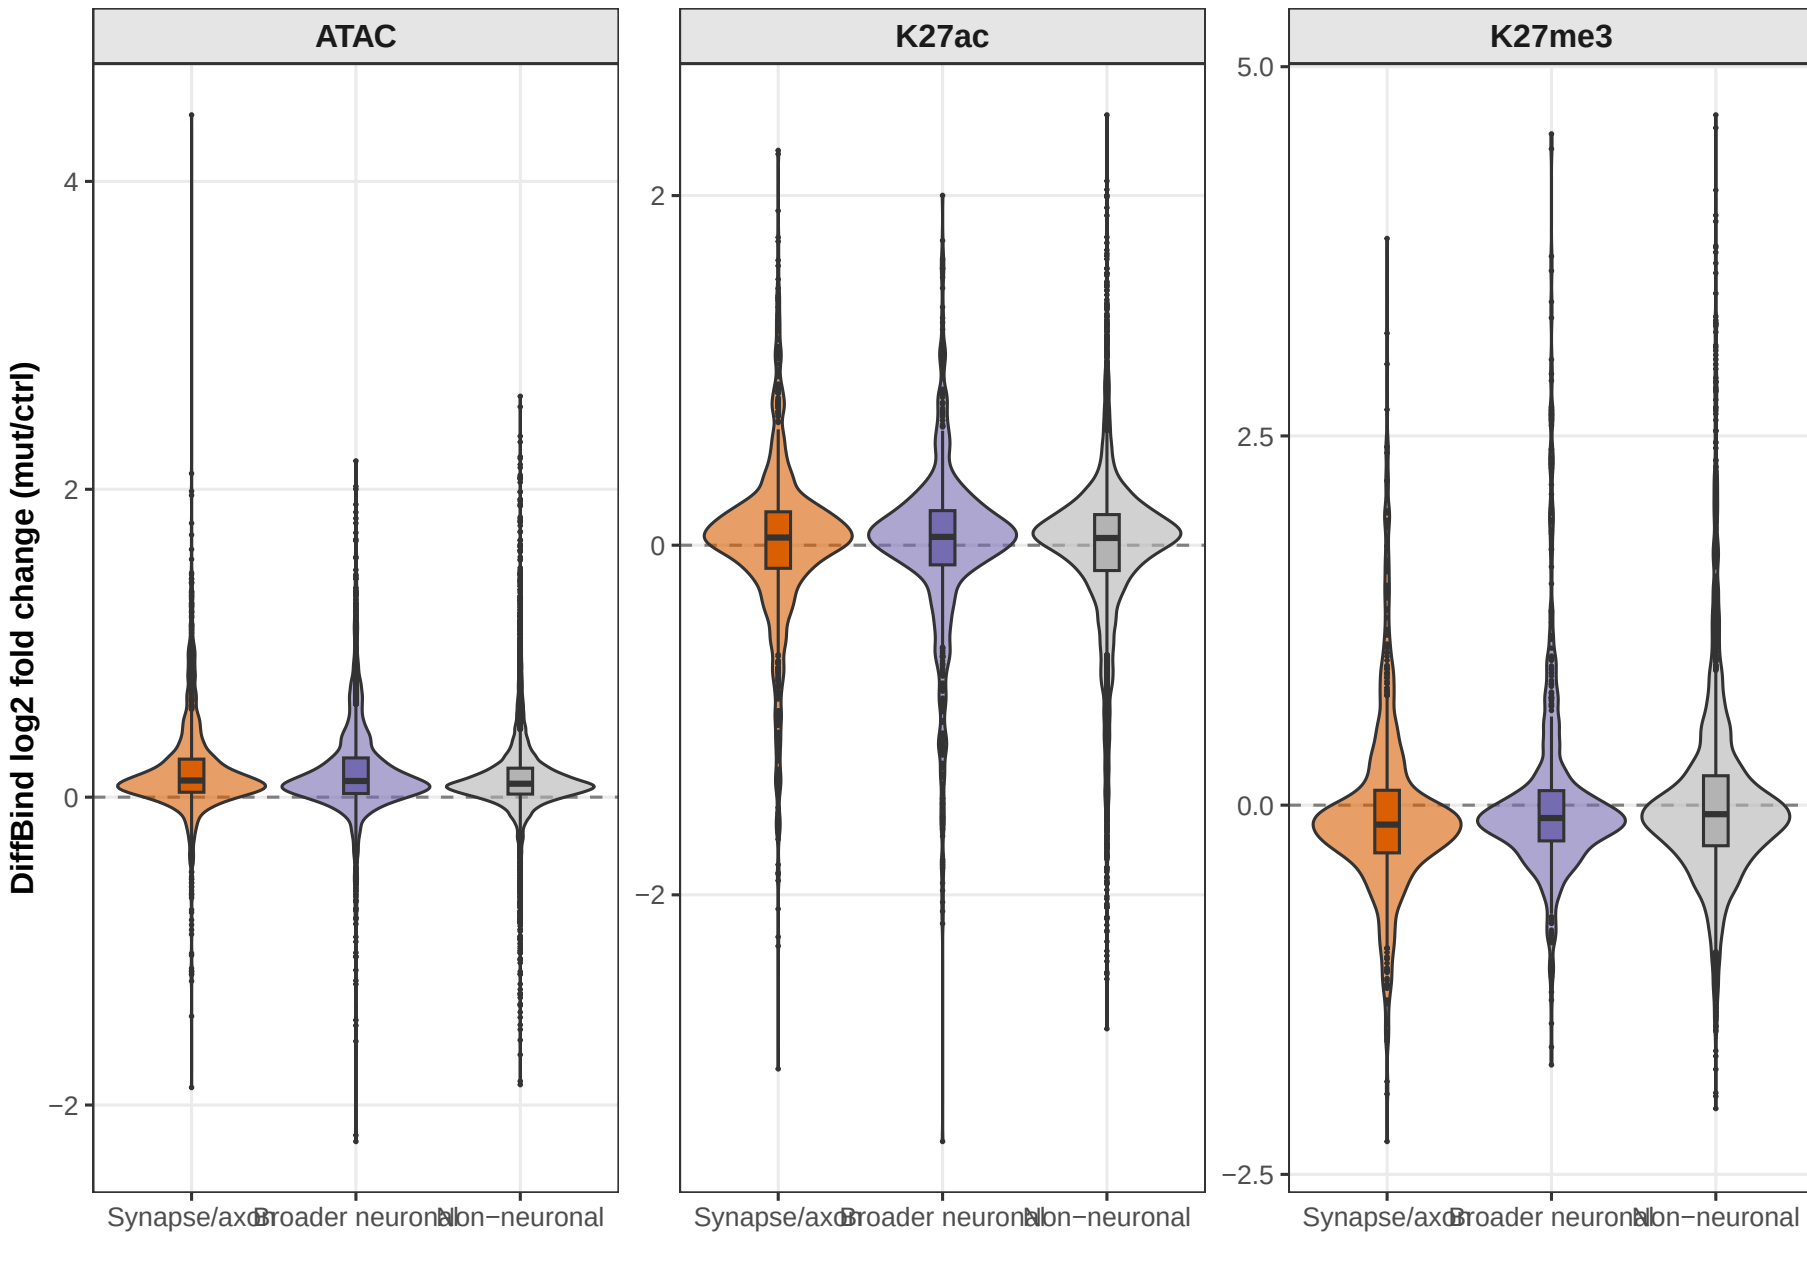

Chromatin remodeling by gene set membership

Triple = Neuronal . Coordinated . MeCP2-Up (16 genes)

Chromatin remodeling: synapse/axon vs broader neuronal

Synapse/axon: 2099 genes (GO: synap|axon) | Broader neuronal: 2019

K119ub top-decile (D10) enrichment

Are triple-overlap / synapse genes disproportionately K119ub-high?
