

Section 77: MeCP2 Developmental Trajectory (Young vs Adult)

Mutants show ~2.5x more significant age-related MeCP2 changes than controls

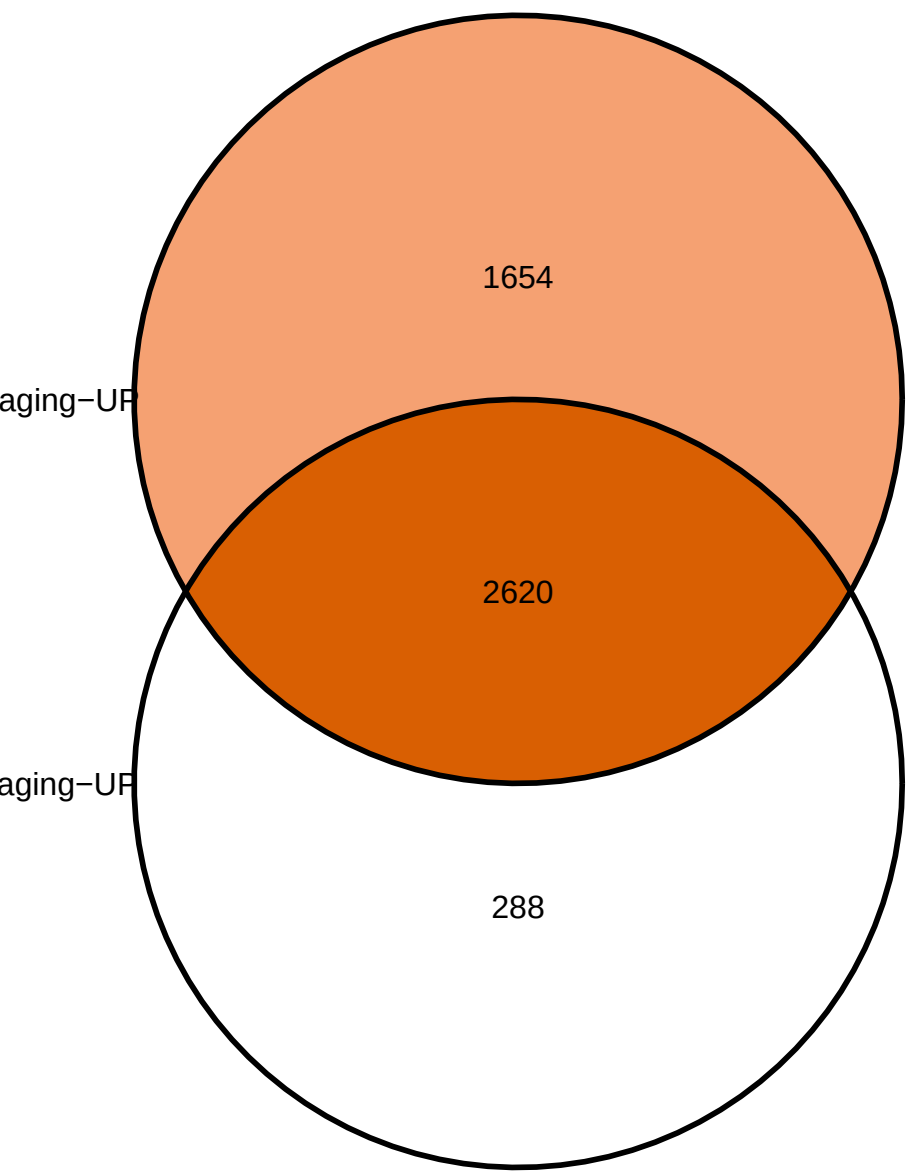

MeCP2 binding changes: young -> adult

DiffBind young vs adult within each genotype

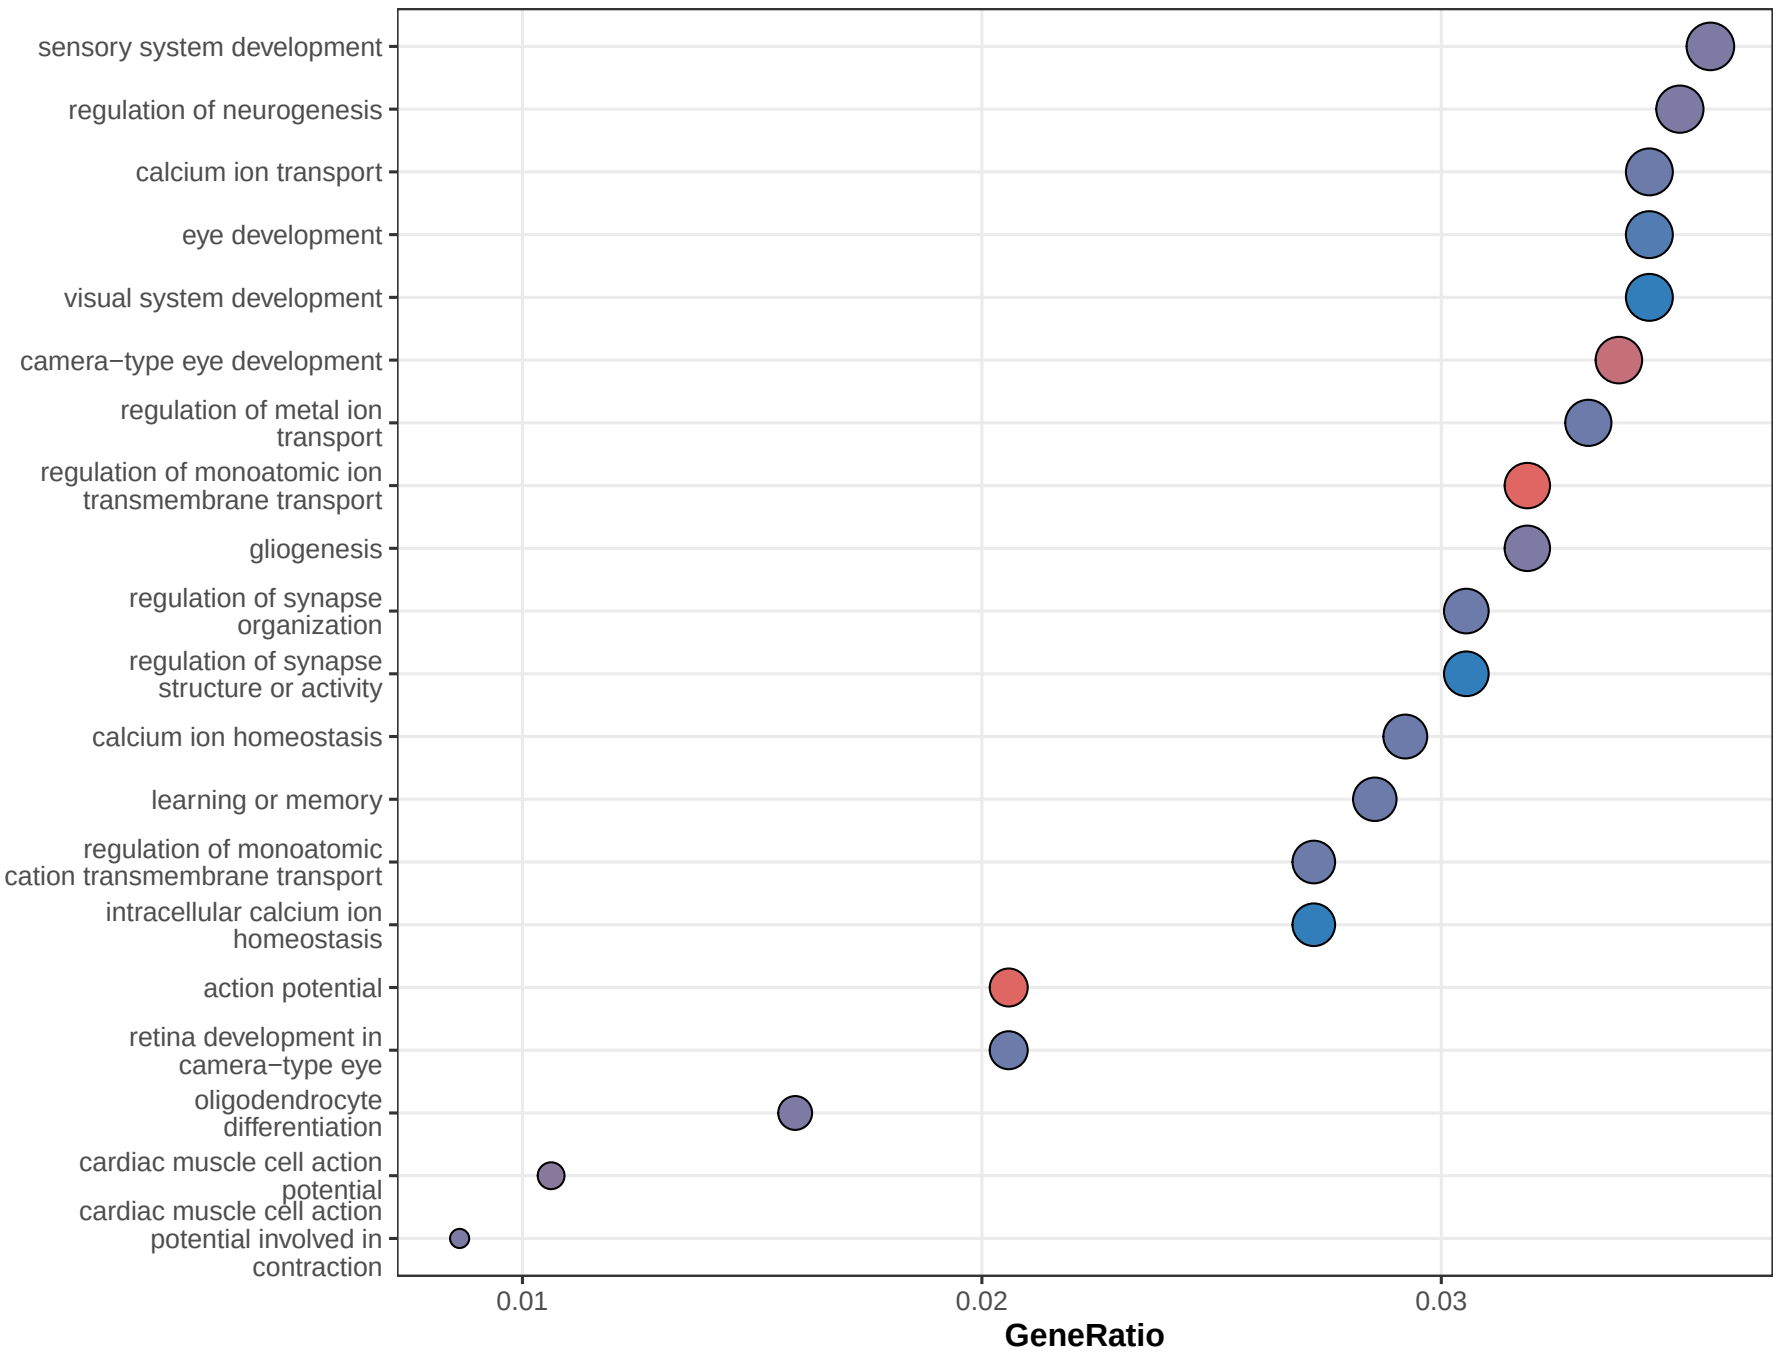

Aging-increased MeCP2 binding: gene-level overlap

Ctrl: 2,908 genes | Mut: 4,274 genes | Shared: 2,620

GO enrichment: mut-specific aging genes

1654 genes gaining MeCP2 only in mutant aging

MeCP2 aging fold: ctrl vs mut at shared peaks

n=7,305 shared peaks | Paired Wilcoxon $p < 2.2e-16$

Above diagonal = mut ages more than ctrl
