

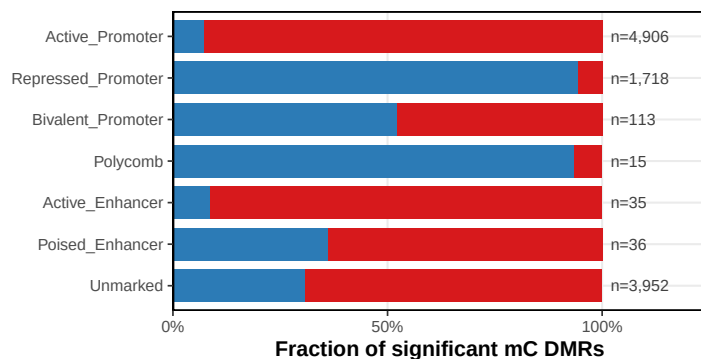

Figure 2 | H2AK119ub drives hypermethylation at active chromatin

A

DMR direction by chromatin state

Active_Promoter 93% hypermethylated

■ Hypermethylated ■ Hypomethylated

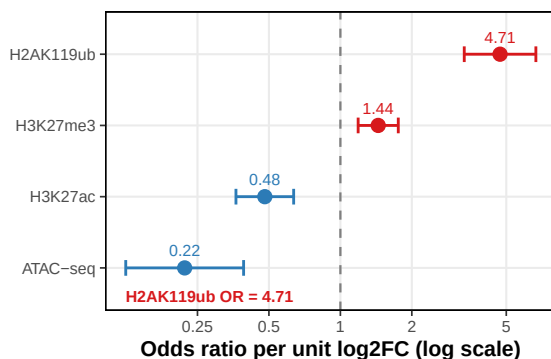

B

Mark log2FC predicts mC hypermethylation

4-mark logistic model (DiffBind), AUC = 0.818

● Promotes hypermethylation ● Protective

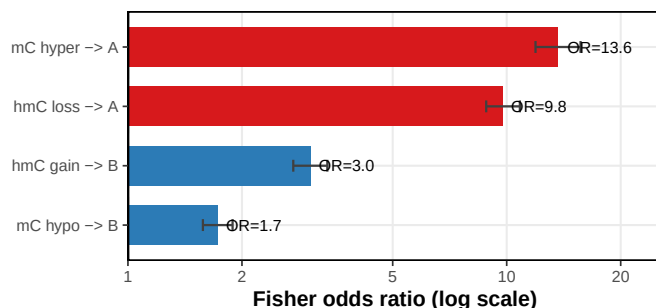

C

Methylation geography in A/B compartments

Hypermethylation enriched in A (OR = 13.6)

■ A (euchromatin) ■ B (heterochromatin)

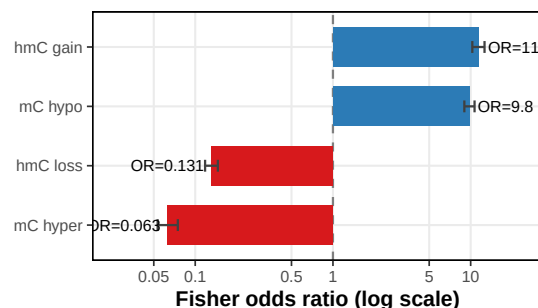

D

Polycomb chromatin is protected

Hypermethylation excluded from Polycomb (OR = 0.063)

■ Enriched at Polycomb ■ Excluded from Polycomb

E

K119ub coupling: real but partial

58% of DMR genes carry no K119ub peak

■ % with no K119ub peak ■ % K119ub gained (peak-bearing)
