

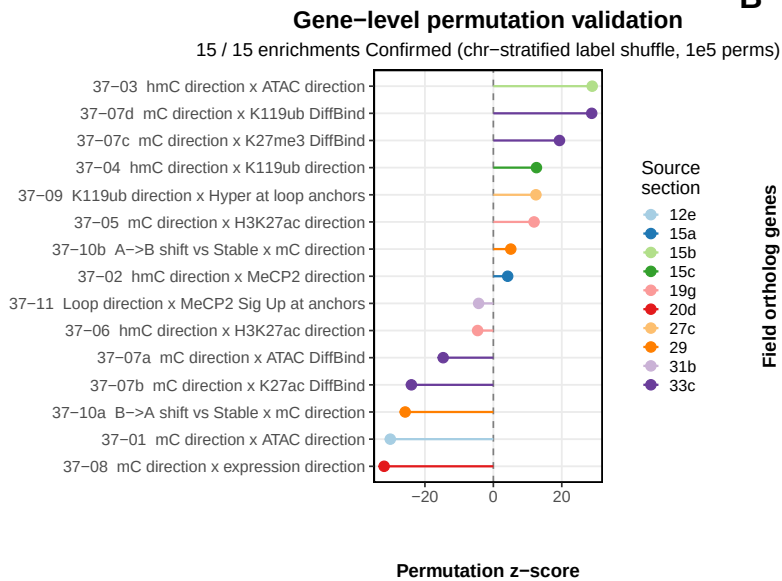

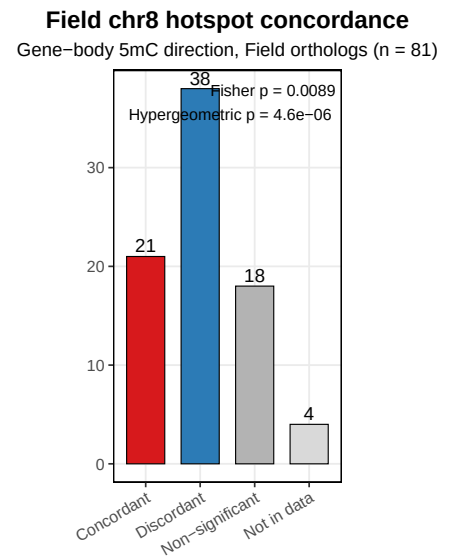

Figure S1. Supplemental evidence: independent corroboration of the BAP1-KO methylation phenotype

A

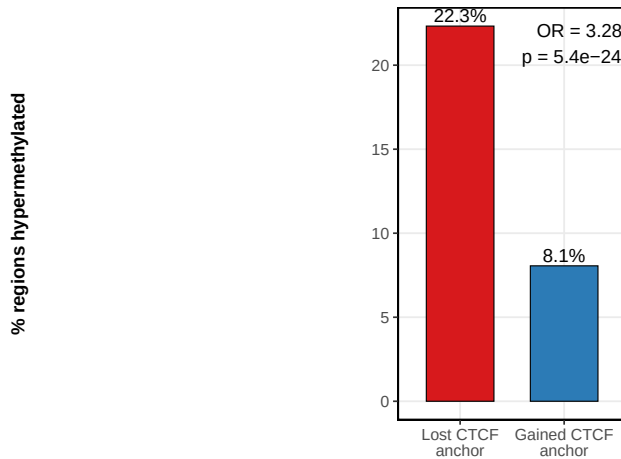

B

C

CTCF anchor 5mC hypermethylation

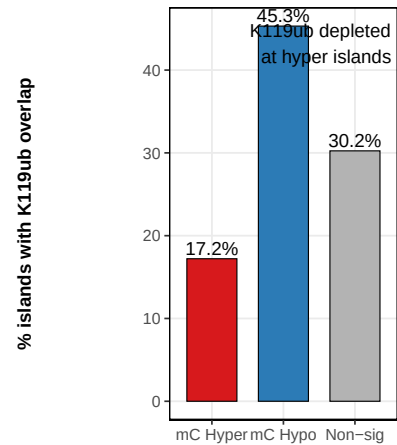

% mC-hyper at flanking dynamic CpG regions

D

CpG-island H2AK119ub depletion

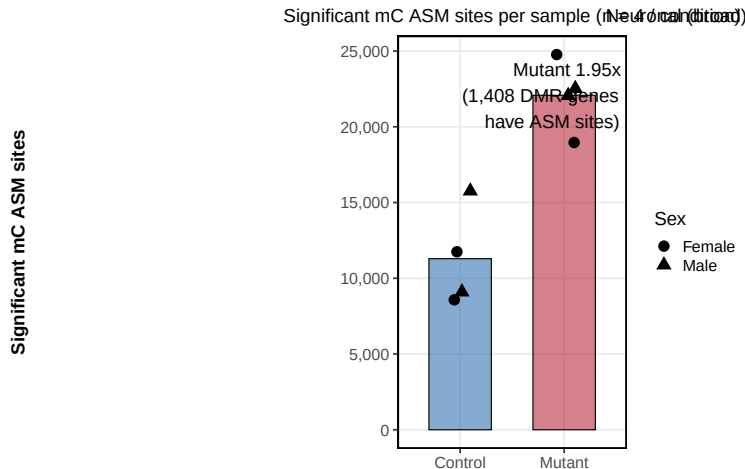

% islands with mutant K119ub peak overlap

E

Allele-specific methylation doubling

Significant mC ASM sites per sample (Neuronal (broad))

F

Total methylation by gene set (unbiased)

Mean total-methylation change (mut - ctrl)
