

Filtered Shift Analysis Summary (early)

Shifted TAD boundaries with ≥ 10 kb (1 bin) shift distance | $n = 332$

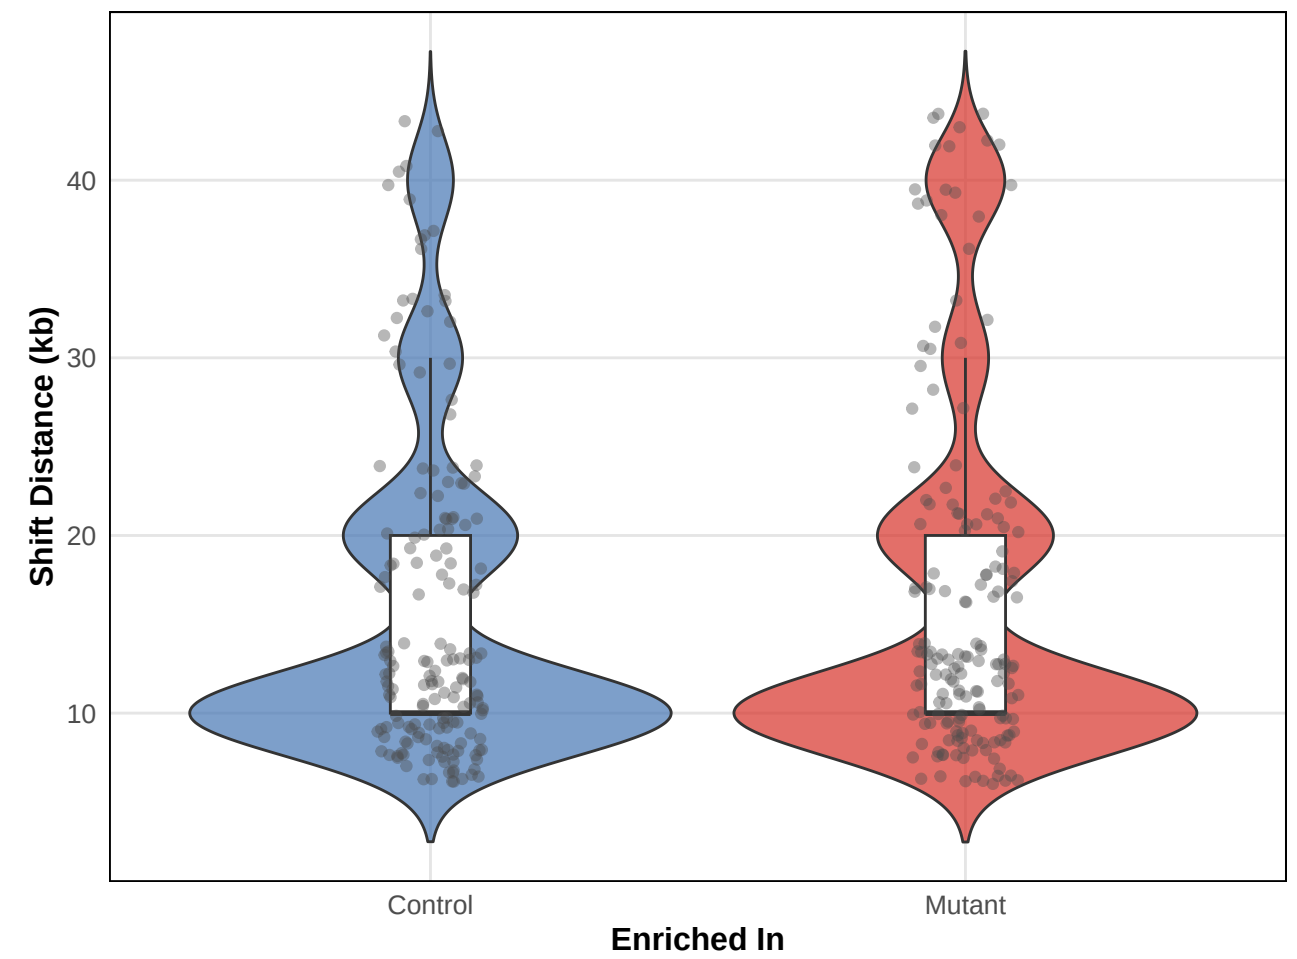

Shift Distance Distribution (Filtered)

Shifted boundaries ≥ 10 kb ($n = 332$) | Median = 10.0 kb | early

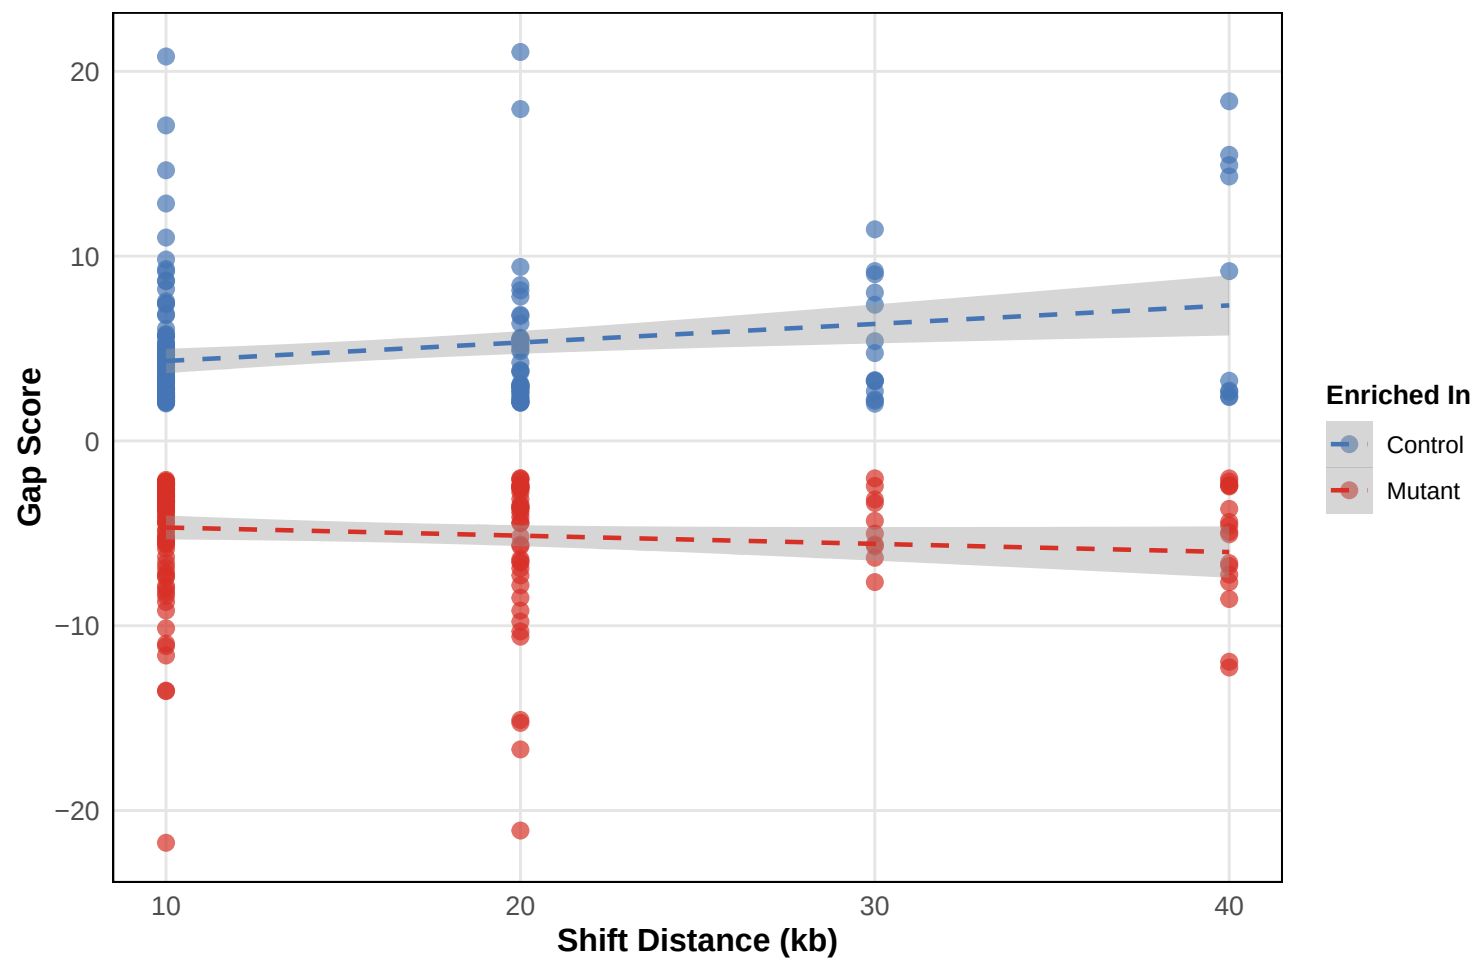

Shift Distance by Enrichment Direction (Filtered)

$n = 332$ boundaries | early

Shift Distance vs Gap Score (Filtered)

Do larger shifts correlate with stronger differential signal? | early

Shift Distance Bins by Enrichment Direction

Filtered to ≥ 10 kb shifts | $n = 332$ | early
